

**Amendments to the Specification:**

Please replace the paragraph beginning at page 5, line 6, with the following rewritten paragraph:

-- The ball bearing (30) with multiple balls is mounted in the body (10) and around the driving member (21). In an optional embodiment, the balls of the bearing (30) are rotatably mounted on an annular ball holder (32). The washers (34) are mounted around the driving member (21) and place the ball bearing (30) between the washers (34). Each washer (34) has a contact side facing to each other and an annular groove (342) with a concave bottom defined in the contact side to completely contacting with the balls to receive the balls of the ball bearing (30) in cooperation with the groove (342) in the other washer (34). --
